

Hi Segun

Thank you for implementing the latest updates to the **Homepage** and **Find Properties** page.

I have reviewed both pages against the feedback provided and I am happy with the improvements.

1. Homepage – Approved

The homepage changes have now been implemented as agreed, including:

- Clear property sourcing and investment positioning.
- Simplified hero and property search.
- Property opportunities appearing early in the journey.
- **Discover** → **Evaluate** → **Progress** simplified journey, with matching incorporated into Evaluate.
- Explainable Investment Intelligence.
- Simplified audience/professional routes.
- Reduced duplication and overall homepage length.
- Shorter Trust & Transparency section.
- Updated sourcing-focused footer proposition.
- Consistent **Find Properties** customer-facing terminology.

The homepage is now approved.

Please do not make further structural changes to the homepage unless they are driven by usability testing, performance/accessibility requirements or an agreed new product requirement.

2. Find Properties – Core UX Approved

The major Find Properties improvements have also been implemented successfully.

I am happy with:

- **Find Properties / Find Property Opportunities** positioning.
- Search and property discovery appearing immediately rather than after explanatory content.
- **Location/Postcode | Budget | Investment Strategy | Search Properties** as the primary search.
- Advanced criteria moved under **More Filters**.
- Results count, sorting and Grid/List controls.
- Removal of the previous large Public Discovery/Marketplace Discovery explanatory sections.
- Protected information reduced to a concise notice with **Learn More**.
- Customer-facing terminology changed from Marketplace to **Find Properties / Property Opportunities**.

This page now feels much more like a **property sourcing/discovery experience** rather than another marketing page.

3. Two Final Items for Find Properties

There are only two items I would like completed/validated before final sign-off:

A. Improve the zero-results experience

When there are no available properties, please avoid showing only “**0 available opportunities.**”

Please introduce a helpful empty state such as:

No property opportunities match your search yet.

Try changing your location, budget or investment criteria.

Clear Filters | Change Search

This should help users recover from a search rather than reaching a dead end.

B. Property result cards

I cannot fully validate the Find Properties result-card experience while the live page has no populated results.

Once test/sample properties are available, please ensure the result cards communicate the investment opportunity clearly and consistently, including where applicable:

- Property image, type and location
- Asking Price — **Fact**
- Bedrooms/bathrooms
- Gross Yield — **Calculation**
- Estimated Rent — **Estimate**
- BMV/market comparison where available and appropriately labelled
- Verification/trust indicator where applicable
- Personalised Match information for eligible signed-in investors
- Clear **View Opportunity** action

Please ensure **Fact, Calculation, Estimate, Match/Algorithmic output, AI Insight and Verification** remain clearly distinguishable rather than presenting all information as equally authoritative.

4. Future Capability – Not a Current Blocker

Save Search / Create a Property Requirement remains a useful future capability, particularly when Asancha does not currently have an opportunity matching an investor's requirements.

However, this should remain on the product roadmap and **should not delay the current Find Properties release**.

Next Step

Subject to the two Find Properties items above, I am happy to move on from the Homepage and Find Properties.

The next priority should be the **Property Details / Property Opportunity page**, because we now need to validate the end-to-end investor journey:

Homepage → Find Properties → Property Opportunity → Evaluate → Save/Progress

This is where we should ensure the property information, Investment Intelligence, trust/verification, protected information and investor actions work together as one clear experience.

Thank you.
